ELSEVIER'S POLICY ON Ethics in Publishing - Transplantation Proceedings:

(Please refer to information on [Ethics in publishing](#))

Studies in humans and animals

If the work involves the use of human subjects, the author should ensure that the work described has been carried out in accordance with [The Code of Ethics of the World Medical Association](#) (Declaration of Helsinki) for experiments involving humans. The manuscript should be in line with the [Recommendations for the Conduct, Reporting, Editing and Publication of Scholarly Work in Medical Journals](#) and aim for the inclusion of representative human populations (sex, age and ethnicity) as per those recommendations. The terms [sex and gender](#) should be used correctly.

Authors must include a statement in the manuscript that informed consent was obtained for experimentation with human subjects. The privacy rights of human subjects must always be observed.

All animal experiments must comply with the [ARRIVE guidelines](#) and therefore be carried out in accordance with the U.K. Animals (Scientific Procedures) Act, 1986 and associated guidelines, [EU Directive 2010/63/EU for animal experiments](#), or the National Research Council's [Guide for the Care and Use of Laboratory Animals](#). Authors must clearly indicate in the manuscript that such guidelines have been followed. The sex of animals must be indicated, and where appropriate, the influence (or association) of sex on the results of the study.

Informed consent and patient details

Studies on patients or volunteers require ethics committee approval and informed consent, which must be documented in the paper. Appropriate consents, permissions and releases must be obtained where an author wishes to include case details or other personal information or images of patients and any other individuals in an Elsevier publication. Written consents must be retained by the author but copies should not be provided to the journal. HOWEVER, authors must state that such consents are available upon request, since only if specifically requested by the journal in exceptional circumstances (for example if a legal issue arises) the author must provide copies of the consents or evidence that such consents have been obtained. For more information, please review the [Elsevier Policy on the Use of Images or Personal Information of Patients or other Individuals](#). Unless you have written permission from the patient (or, where applicable, the next of kin), the personal details of any patient included in any part of the article and in any supplementary materials (including all illustrations and videos) must be removed before submission.

IMPORTANT TO KNOW: This journal strictly complies with the Helsinki Congress and the Istanbul Declaration regarding donor source. Donors must not be from prisoners, or from those individuals who are coerced or paid. Please include a statement within the Abstract and Text regarding compliance. Authors may be asked to provide written documentation.

ELSEVIER'S POLICY ON THE USE AND DECLARATION OF AI AND AI-ASSISTED TECHNOLOGIES IN SCIENTIFIC WRITING:

Where authors use artificial intelligence (AI) and AI-assisted technologies in the writing process, authors should:

- Only use these technologies to improve readability and language, not to replace key researcher tasks such as interpreting data or drawing scientific conclusions.
- Apply the technology with human oversight and control, and carefully review and edit the result, as AI can generate authoritative-sounding output that can be incorrect, incomplete or biased.
- Not list AI and AI-assisted technologies as an author or co-author, or cite AI as an author. Authorship implies responsibilities and tasks that can only be attributed to and performed by humans, as outlined in Elsevier's AI policy for authors.
- Disclose in their manuscript the use of AI and AI-assisted technologies in the writing process by following the instructions below. A statement will appear in the published work. Please note that authors are ultimately responsible and accountable for the contents of the work.

Disclosure instructions

Authors must disclose the use of AI and AI-assisted technologies in the writing process by adding a statement at the end of their manuscript in a new section entitled 'Declaration of AI and AI-assisted technologies in the writing process'.

Statement: During the preparation of this work the author(s) used [NAME TOOL / SERVICE] in order to [REASON]. After using this tool/service, the author(s) reviewed and edited the content as needed and take(s) full responsibility for the content of the publication. This declaration does not apply to the use of basic tools for checking grammar, spelling, references etc. If there is nothing to disclose, there is no need to add a statement.

Transplantation Proceedings is peer-reviewed, therefore all manuscripts will undergo extensive review, and authors will be notified of the outcome. We look forward to continued collaboration with the Society in publishing groundbreaking transplantation research.

SPECIAL NOTE:

- If you feel your manuscript may benefit from inclusion of Roc analysis, Multivariate analysis, "p" value, "NPV" or "PPV", then please include this in the initial submission as this is one of the most required revisions to manuscripts following review
- If your data supports inclusion of a detailed Table of BMI, Age, Gender, or other demographic data, etc, then please include it initially
